

Tech Tip Tuesday (October 7, 2025)

October is *National Cyber Security Awareness Month*

In the never-ending battle against cyber villains, you are on the front lines!

Only the most-experienced and well-equipped can stand up against AI deepfakes, ransomware and other threats lurking behind every corner of cyberspace.

This month, we will be sharing tips, training, and simulated hacker attacks to help keep our defenses up. **Be on the lookout for suspicious emails and report them immediately!**

Watch out for the CYBERPUNKS!

Social engineering is one of the most common ways cyber villains break into computer networks to cause havoc and destruction.

They rely on being able to convince users like you to click a link or send them your passwords and will try all sorts of tricks to do it!

That's why for the first step of your cybersecurity quest this October, we're sharing an interactive training course all about spotting the red flags of social engineering.

If you have any questions, feel free to reach out to bking@ulusd.org.

Thanks, and look for more cybersecurity content all this month!
